Advice JSON API Website

- Design a website to show instructions for user to use the API, and allow users to visualize API usage in the dashboard.
- Develop a backend in next.js to authenticate users, store users data and consume the API from external source.

[Github](#) [Site](#)

Starbucks Landing Page

- Design a landing page where users can login or create account and buy starbucks drink, and using redux toolkit for state management
- Used Stripe to implement payment system.

[Github](#) [Site](#)

URL Shortening Website

- Design a fully responsive website which allows users to input the long URL and get short URL, storing data in local storage.
- Used JavaScript and Fetch API to consume external API and get URL shortened.

[Github](#) [Site](#)

React Disney Clone

- Design a fully responsive disney clone website with react.js and redux.
- Implemented simple user authentication using Firebase authentication. Uses Redux to manage the user and state. Fetch data hosted in Firestore Database using Axios.
